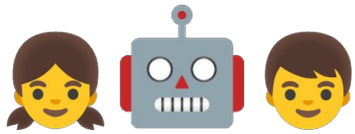
📖 PREFACE



Artificial Intelligence is shaping how we learn, communicate, travel, farm, heal and create. As senior students, you are ready not only to use AI tools, but to understand how they work, question their answers and use them responsibly. This book is designed to build exactly those skills.

This book has been prepared for the Global AI Olympiad (GAIO) by Mamma Ada Centre, in collaboration with FACM, Italy. It follows the GAIO six-month journey: AI Discover, AI Connect, AI Solve, AI Rise, AI Create and AI Care. Each month introduces two topics suited to the curiosity and abilities of Class 7 learners.

Every topic opens with a clear introduction and continues with "Tech Talk", a group chat in which Riya, Kabir and their AI mentor Bolt explore ideas through real-life examples. A "How it works" flow, an India Spotlight, a hands-on Demo Lab with real AI tools, an "AI Chronicles" story, worksheets, quizzes, and standard and case-based exercises help you learn by reading, doing, questioning and creating.

Values are at the heart of this book. Along with learning what AI can do, children learn that people create and guide technology, that AI can make mistakes, and that safety, kindness and privacy matter online and offline.

🤝 A note for teachers and parents

Encourage students to try the Demo Labs under supervision, discuss the case studies, and question AI answers rather than accept them blindly. Praise reasoning and curiosity as much as right answers. An answer key is provided at the end of the book.

We hope this book sparks curiosity, creativity and confidence in every young learner. Curious minds, brighter futures!

With best wishes,

The GAIO Academic Team

Bolt, everyone says 'data is the new oil' 🛢️. What does that mean?

10:02

🤖 Bolt

Data is information: numbers 🔢, words, pictures 🖼️ and sounds 🔊. AI runs on it, like engines on fuel.

10:04 ✓✓

👦 Kabir

And a dataset?

10:06

🤖 Bolt

An organised collection of data, often a table 📋: rows are examples, columns are features.

10:08 ✓✓

👧 Riya

Like our class marks sheet?

10:10

Kabir
What is 'clean data'?
10:14

Bolt
Data without errors, duplicates or missing values 🧹.
Dirty data like '1O0' instead of '100' confuses AI.
10:16 ✓✓

Riya
So better data, better AI ✅; bad data, bad AI ❌!

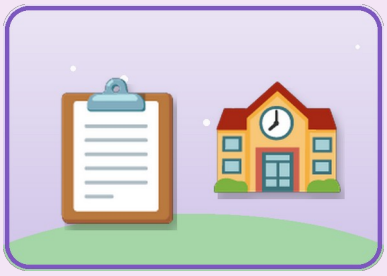
AI CHRONICLES: The Dirty Data Disaster

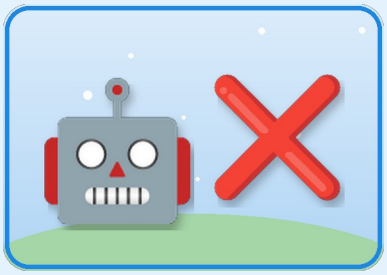
Riya Kabir Ms. Iyer



SCENE 1

The class trained a simple AI to predict who would join the science club, using a survey of 100 students 📋.

The AI predicted that students aged 150 love robotics! Everyone laughed. Something was wrong 😅.



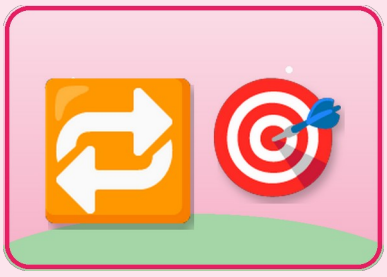
SCENE 2

SCENE 3

Riya checked the data: '150' was a typo for '15', some names appeared twice and many answers were blank.

They cleaned it: fixed typos, removed duplicates and filled missing answers by asking again 🗣️.

SCENE 4



SCENE 5

Retrained on clean data, the AI's predictions matched real sign-ups much better 📈.

Ms. Iyer wrote on the board: 'Garbage in, garbage out. Clean data, clever AI!'

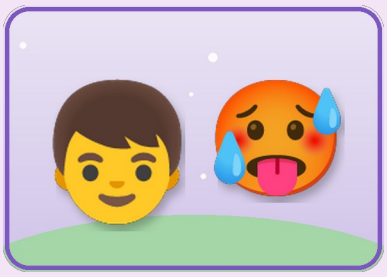
AI CHRONICLES: The Water Buddy App

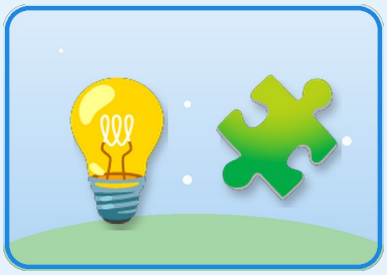
Kabir | Dr. Anita | Bolt



SCENE 1

After football, Kabir felt dizzy. Dr. Anita said, "You're not drinking enough water 💧."

Kabir had an idea: an app to remind him. He broke it into steps: ask, check, remind, count.



SCENE 2

SCENE 3

He coded input for glasses drunk, and an if-else: fewer than 8 'Drink more water!'

His loop printed reminders forever! Bolt helped him find the bug: he forgot to limit the loop 🔧.

DEMO LAB: Teachable Machine (with teacher)

Name: _____ Date: _____

Goal: See how biased training data creates unfair AI.

Open: teachablemachine.withgoogle.com | **With a teacher or parent**

Steps

1. Create classes 'Thumbs up' and 'Thumbs down'.
2. Train using photos of ONLY ONE student's hand.
3. Test it with hands of 4 other classmates.
4. Record how often it is right for each person.
5. Retrain with hands of 6 different students. Test again.

Record your observations

Accuracy with one-person data:	
Accuracy with diverse data:	
Who did the first model fail for?	

Reflect: How does this experiment explain bias in real AI systems?
